New Senior Housing
Fife, WA

This project is a fifty-unit affordable apartment building for seniors. The design was the result of working closely with potential residents, city planning officials, the general contractor and members of the adjacent Korean Catholic Church to design common spaces and individual units appropriate for their needs. Common spaces are light-filled and include a party room with kitchen, lounge, classrooms, laundry facilities, ornamental and productive gardens. Sustainable features include construction waste recycling program, locally-sourced materials, energy efficient appliances and lighting, natural ventilation, low voc paints and carpets. The three story building will take advantage of views to Mount Rainier.
